INDUSTRIAL EQUIPMENT

Our company manufactures not only high-quality infrastructure facilities, but also equipment for their installation and maintenance.

We have developed a set of equipment for installing our hatches.

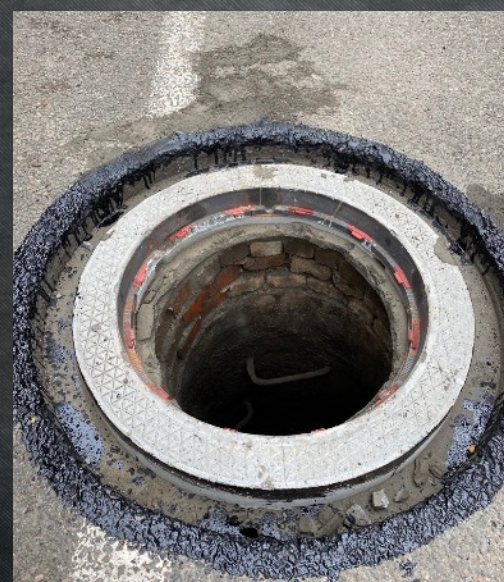

With the help of a hydraulic cutter and fast-hardening mixtures, replacing the hatch takes about half an hour, and the compact dimensions of the complex allow blocking only one lane.

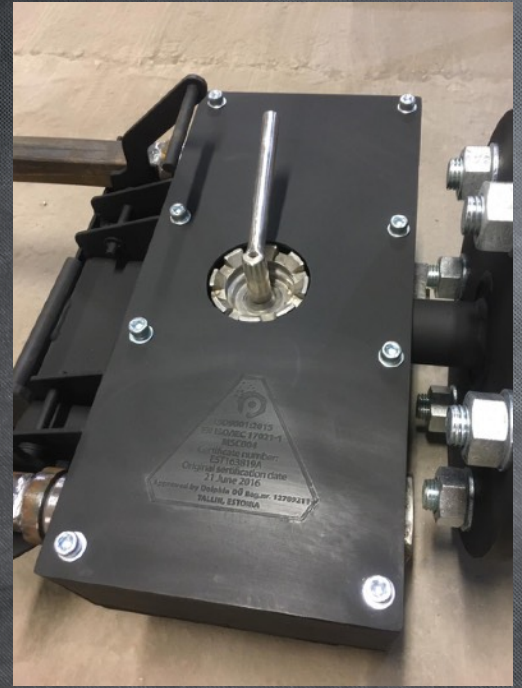

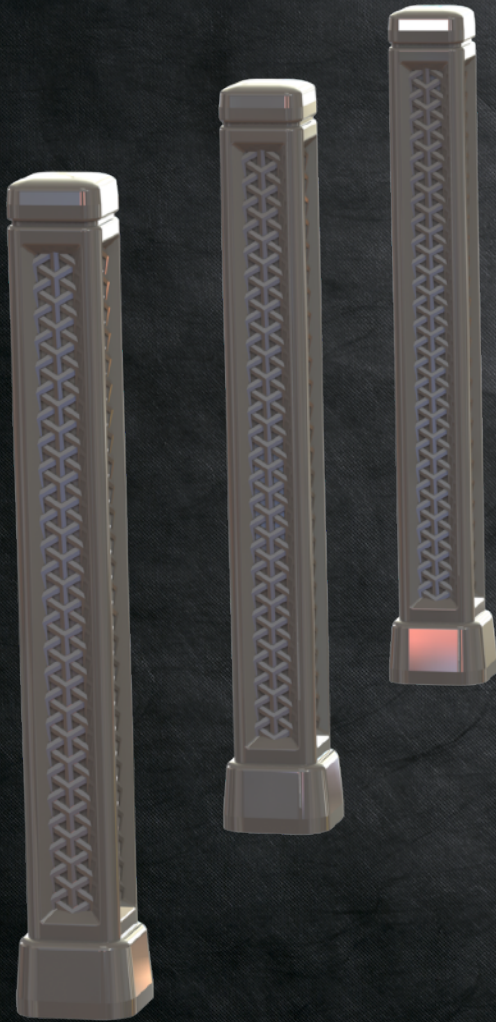

Thanks to fast and high-strength compounds, the installation of the hatch takes minimum time and traffic can be opened in 10 minutes after pouring the mixture.

High strength, adhesive properties and excellent quality is ensured by the use of only imported and certified additives and ingredients for concrete.

Industrial equipment for production of polymer products. Possibility of mass production launching in short terms.

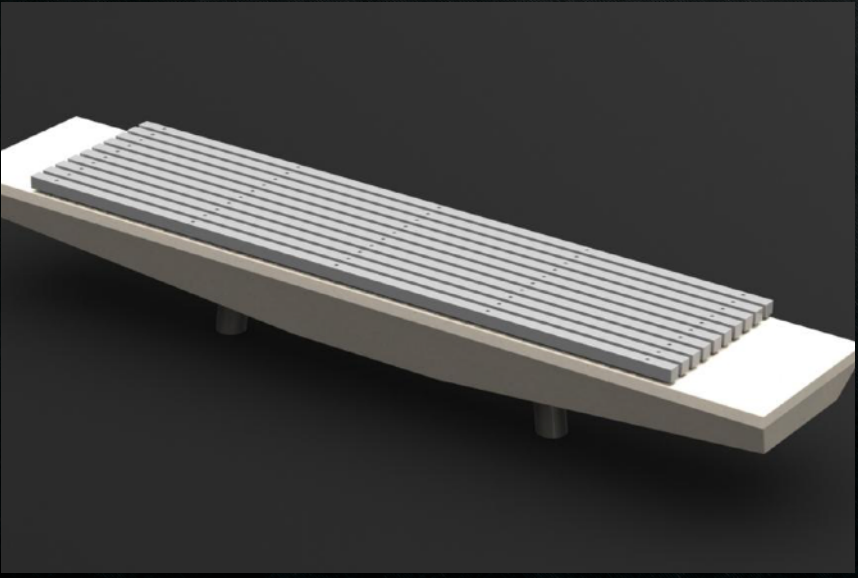

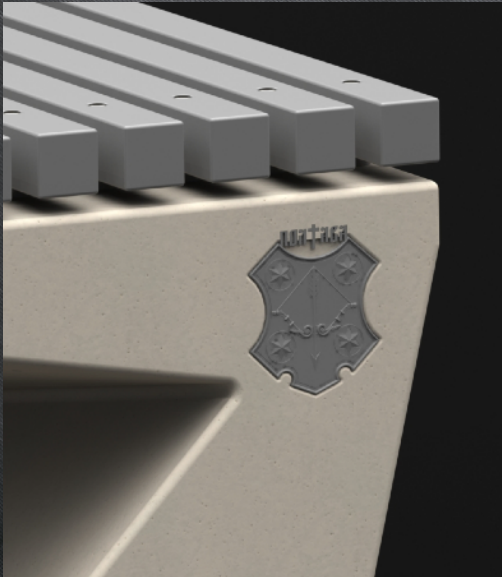

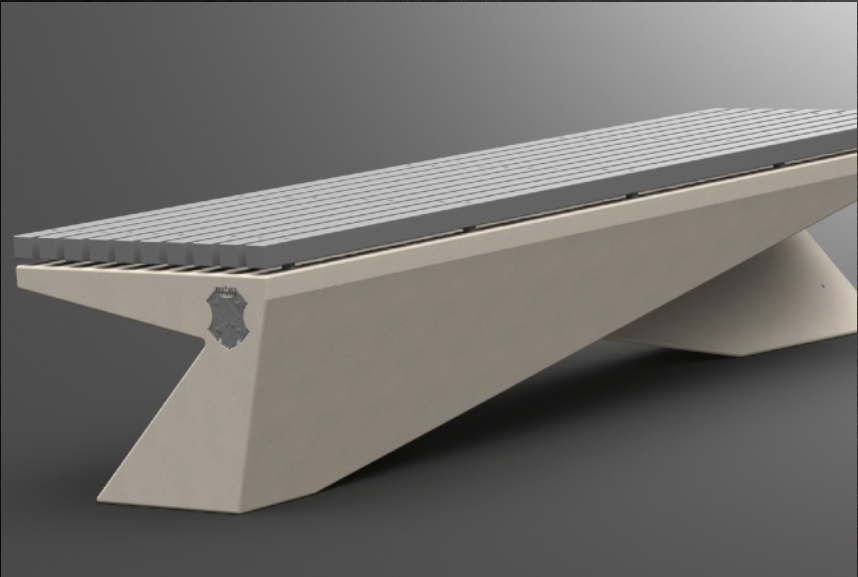

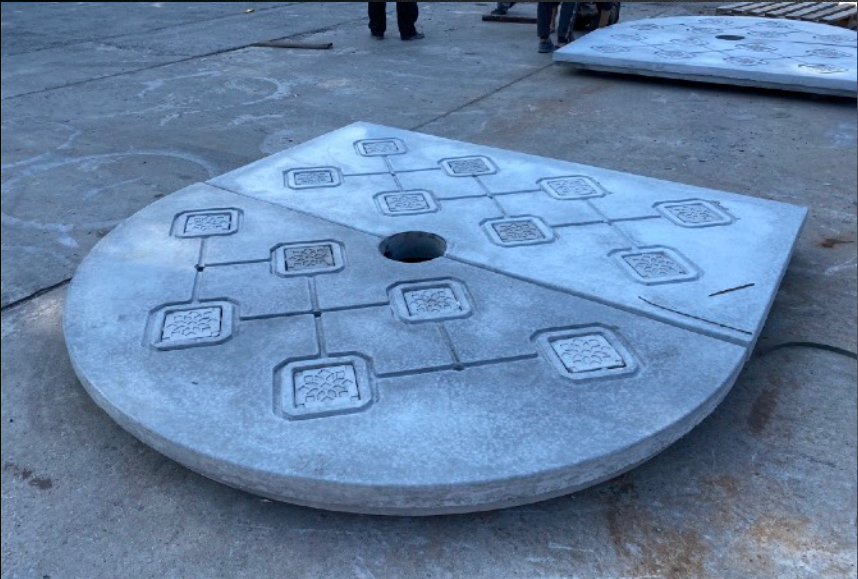

Equipment, related to maintenance of infrastructure facilities, as well as lifting mechanisms.

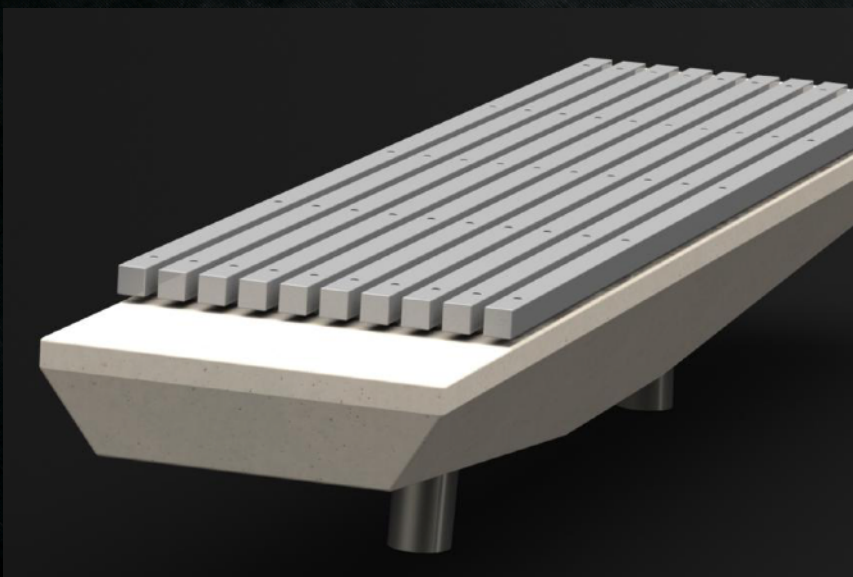

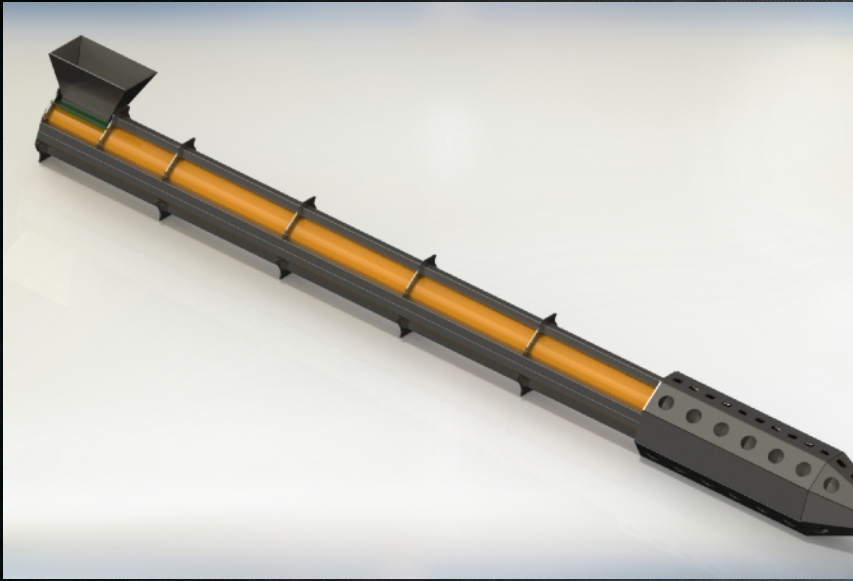

Production of any forms for working with concrete mixtures by the method of vibration and vacuum forming

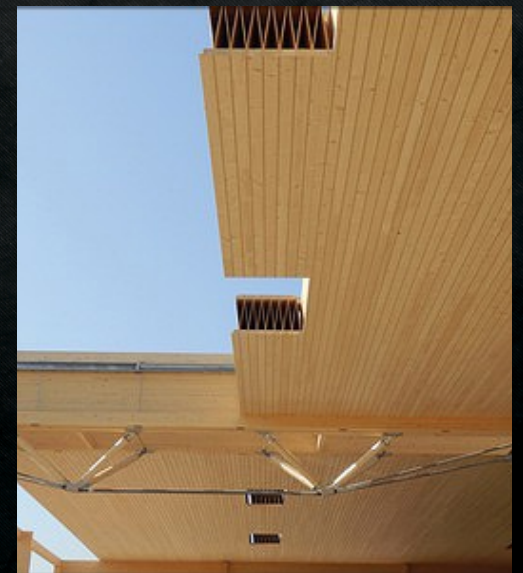

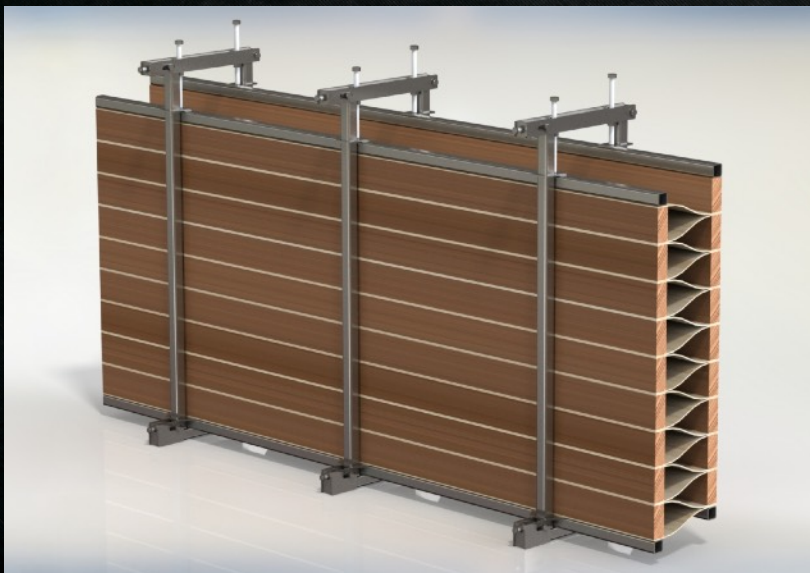

Production of any forms for working with concrete mixtures by the method of vibration and vacuum forming, or products from high-strength, glass-reinforced concrete.

Modern, energy-saving systems and equipment for housing construction.

Environmentally friendly, fast and modern technologies for building warm and comfortable housing.
